

STRONGSEAL[®]
ROOFING MATERIALS

protect your structure and
the environment at the same time.

StrongSeal is a performance eco-friendly rubber roofing underlayment membrane that delivers exceptional waterproofing performance over traditional asphalt based products. Derived from recycled tire crumb, StrongSeal contains an extremely high percentage of recycled and post consumer recycled material making it an exceptionally earth friendly product perfect for sustainable living.

CETCO[®]

www.cetco.com

- **Longevity** – StrongSeal contains an elastomeric alloy (engineered rubber). It is derived from recycled tires so it is asphalt free and contains no light oils to leach out. The life cycle of StrongSeal meets or exceeds that of the roof covering minimizing life cycle costs.
- **Durability** – StrongSeal’s engineered rubber is extremely flexible and it’s robust construction resists wind tearing, rain absorption and sun degradation. The adhesive is an engineered, asphalt free adhesive that “wets-out” into the substrate. With a high melt strength temperature (thermally stable to over 280°F) and a high peel adhesion (exceeds requirement of 12 lbF/ft @ 75°F), StrongSeal will last through extreme conditions and temperatures.
- **Walkability** – A thick rubber membrane promotes traction “like a gym shoe” both wet and dry as well as wrinkle and tear resistance. It also addresses safety concerns.**
- **Sustainability** – StrongSeal is derived from recycled tires. It contains the highest percentage of post-consumer recycled content of current roofing underlayments – recycling over 600 tires per truckload. It’s 100% recyclable and its longevity and durability reduce life cycle costs making it perfect for LEED projects.
- **Functionality** – The elastomeric properties of the StrongSeal membrane provide a watertight seal around fasteners and the puncture and tear resistance prevents exposure of the adhesive. The membrane permits natural expansion and contraction of metal roof coverings and it’s compatible with single-ply and low slope tie-ins.
- **Assurity** – StrongSeal is backed by a 20-year limited written warranty and by CETCO, a worldwide manufacturer of all products to meet your waterproofing needs.

*** Is not a substitute for proper safety equipment and fall protection.*

- Made From Recycled Tire Crumb Rubber.
- Asphalt Free.
- 100% Recyclable.
- Ideal for LEED Projects.
- High Temperature Resistance.
- Low Temperature Flexibility.
- One-Year Exposure.
- 20-Year Warranty.
- Available in both self-adhered and nail down membranes.

The perfect underlayment for today's environmentally conscious designer.

Each truck load of StrongSeal keeps 600 tires out of your neighborhood landfill, reusing them to protect your home or building.

PRODUCTS

StrongSeal® DB

Nail Down Underlayment

Installed over the field of the roof deck prior to common exterior roofing materials like architectural shingles, slate, tile, shake and metal roofs. The StrongSeal DB is also able to be used at such areas as parapet walls behind EFIS or stucco architectural finish systems.

StrongSeal® DB-18

Used as an interlayment between the shake courses required whether the deck sheathing is spaced or solid. StrongSeal DB-18 interlayment acts as a barrier that prevents wind driven rain and snow from entering the attic cavity during extreme weather conditions by forcing water to the surface and increases the roofs insulating value.

StrongSeal® SA

Self-Adhered Underlayment

Used at critical roof areas such as eaves, valleys, ridges, rakes, dormers, and skylights to protect the structural roof deck from water penetration created by ice dams and wind-driven rain. StrongSeal SA is also used over the field of the roof deck prior to common exterior roofing materials like architectural shingles, slate, tile, shake, synthetics and metal roofs when complete deck coverage is required.

If It's Worth Building, It's Worth Protecting™

StrongSeal®

Roof Deck Protection

Performance Roofing Underlayment

For more than 40 years, CETCO's waterproofing products have garnered worldwide recognition for quality, performance and reliability. By specifying CETCO products, you are assured of optimum waterproofing performance from products specifically engineered to be integrated and installed as a complete waterproofing system. CETCO manufactures and markets a complete line of quality waterproofing membranes, waterstops, drainage composites as well as a complete line of installation accessories - everything you need from the bottom of the excavation to the roof.

The broad product range and installation versatility of our waterproofing systems allow you to work with a single manufacturer to cover all of your waterproofing needs. From zero-lot property line construction to backfilled foundation walls to greenroofs and underlayments, CETCO has the waterproofing solution.
